

Object Oriented Programming Lab

Lab 03

Instructions

Work on this lab individually. You can use your books, notes, handouts etc but you are not allowed to borrow anything from your peer student.

Write down the lab number, task number, your name and roll number at the start of each task code using comments.

For Example

```

/*****
Lab:    xx
Task:   yy
Developer:
        Roll #: XXXYYYZ000
        Name:  XYZ
*****/

```

What you have to do

Program the following tasks in C++, compile and execute them.

Task

Write a program that stores the following data about a player in a structure:

- Player's Name
- Player's Number
- Scored by Player

The program should keep an array of 12 players. Each element is for a different player on a team.

When the program runs, it should ask the user to enter the data for each player using a loop. It should then print the list of player's number, name, and scores.

The program should also calculate and display the total points earned by the team. The number and name of the player who has earned the most points should also be displayed.

😊😊😊 **BEST OF LUCK** 😊😊😊
