

Object Oriented Programming Lab

Lab 06

Instructions

Work on this lab individually. You can use your books, notes, handouts etc but you are not allowed to borrow anything from your peer student.

Write down the lab number, task number, your name and roll number at the start of each task code using comments.

For Example

```

/*****
Lab:    xx
Task:   yy
Developer:
        Roll #: XXXYYYZ000
        Name:  XYZ
*****/

```

What you have to do

Program the following tasks in C++, compile and execute them.

Task

Design a class **decimalList** that has an array of decimal numbers.

The constructor should accept an integer argument and dynamically allocate the array to hold that many numbers.

The destructor should free the memory held by the array.

In addition, there should be member functions to perform the following operations:

- `AddElement(int index, double val)` —Store a number in any element of the array
- `getHighest()` — Return the highest value stored in the array
- `getLowest()` — Return the lowest value stored in the array.
- `getAverage()` — Return the average of all the numbers stored in the array

Write a `main()` that demonstrates the **decimalList** class by asking the array size, inputting elements, then reporting the highest, lowest and average of elements.

😊😊😊 **BEST OF LUCK** 😊😊😊
