

Object Oriented Programming Lab

Lab 08

Instructions

Work on this lab individually. You can use your books, notes, handouts etc but you are not allowed to borrow anything from your peer student.

Write down the lab number, task number, your name and roll number at the start of each task code using comments.

For Example

```

/*****
Lab:    xx
Task:   yy
Developer:
        Roll #: XXXYYYZ000
        Name:  XYZ
*****/

```

What you have to do

Program the following tasks in C++, compile and execute them.

Task

Design a class **University** that demonstrates aggregation by modeling the following classes.

Create a class **Teacher** with the following members:

- Data members: name, department
- Member function: `displayTeacherInfo()`

Create a class **Course** with the following members:

- Data members: `courseName`, `courseCode`
- Member function: `displayCourseInfo()`

Create a class **University** that **aggregates** Teacher and Course classes.

- Data members: `universityName`
- Contain **objects of Teacher and Course** as member variables.
- Member function: `displayUniversityInfo()` that displays all details (university, teacher, and course).

In the `main()` function:

- Create independent objects of Teacher and Course.
- Pass them to the University object using a parameterized constructor or setter function.
- Display the complete information.

😊😊😊 **BEST OF LUCK** 😊😊😊
